Save it in any folder of your choice, and it'll be. What is the "Marrakesh" of continuous delivery? Developer, Wikicode Wikicode employs a lean startup model of iterative code development. We're a small team of software developers based in Bristol, UK, working with our clients to create and deploy web and mobile software for them, while maintaining a lean approach to deliver new features. Wikicode's continuous delivery philosophy stems from the fact that code can never be fully tested and is therefore prone to defects. Although pushing the environment is a way of automating the process of deployment to and from production, once there, it makes little sense to rush to deploy every change that is made. Instead, Wikicode focuses on iterative development, in order to learn more about the system and to fix bugs along the way. Tracking bugs and features is a time-consuming process that can take up much of your time, but if you are a new feature, it's also a security hazard. The platform should not be trusted with unknown features. If a new feature can run through a test environment and be verified safe, then it can, at the earliest opportunity, be pushed to production. The process of setting up and validating new features can be broken down into a number of key steps, which we refer to as our 'Marrakesh': Validate your new feature in a Virtual Machine Set up your new feature
